EDUCATION

Carnegie Mellon University, School of Computer Science and Heinz College

Pittsburgh, PA

Doctor of Philosophy in Machine Learning (CS) and Public Policy Management (Heinz)

Expected: Dec 2026

Advisors: Profs. George Chen, Jeremy Weiss (NIH), Zachary Lipton (ML)

GPA: 4.1/4.3

Master of Science in Machine Learning (Computer Science)

May 2022

GPA: 4.1/4.3

Master of Science in Biomedical Engineering (Computational Neuroscience)

Dec 2020

Advisor: Prof. Bin He

GPA: 4.0/4.0

University of British Columbia

Vancouver, Canada

Bachelor of Applied Science – Engineering Physics (EE+CS Specialization)

May 2018

Advisor: Prof. Septimiu Salcudean

PHD RESEARCH

Carnegie Mellon University, Machine Learning Department and Heinz College

Pittsburgh, PA

Representation Learning for Unstructured Time Series/Longitudinal Data

Sep 2021 – Present

Temporal-Supervised Contrastive Learning:

- Advanced supervised contrastive learning into the temporal domain through introducing a self-supervised framework learning hyperspherical embeddings centered on prototypical examples for enhanced intrinsic interpretability.
- Achieved state-of-the-art performance in clinical time series outcome prediction by underpinning predictive clustering.
- Devised novel representation learning techniques to adapt deep learning models for complexities of irregularly sampled and variable-length temporal data, crucial for deploying ML in high-stakes settings like clinical decision support in healthcare.

Introducing an Alternative to Data Augmentation:

- Proposed a nearest neighbor pairing mechanism and validated it as an effective alternative for data augmentation in time series data to ensure realistic and meaningful contrastive learning when standard augmentations are not feasible.

Causal Inference for Survival Analysis:

- Developed a longitudinal survival analysis framework that adapts meta-learner strategies to estimate treatment effects under right-censoring and time-varying exposures, enabling robust causal inference in dynamic settings.

Multimodal Temporal Modeling of Structured and Textual Time Series Data with LLMs:

- Developed a framework leveraging large language models (LLMs) to extract, align, and structure time-localized events from unstructured text, improving temporal resolution in predictive modeling.
- Investigating multimodal time series representation learning by integrating structured temporal data with unstructured text to enhance forecasting and causal reasoning in sequential decision-making.

Generative Models for Event Trajectory Forecasting:

- Exploring the development of interpretable generative models to predict future event trajectories from historical data, enabling personalized event sequence analysis and time interval estimation.

SELECTED PROFESSIONAL EXPERIENCE

Google Research

New York, NY

PhD Student Researcher, BigML Team

May 2025 – Nov 2025

- Discovered Transformers and Mamba exhibit **implicit in-weights reasoning**, demonstrating reasoning over stored parameters rather than contextual tokens through a large-scale *path-star* graph task adversarial to next-token learning.
- Revealed that deep sequence models form an emergent **geometric memory** encoding global relationships between non-co-occurring entities, challenging the standard associative-memory abstraction.
- Established and analyzed a theoretical and empirical framework framing large language model memory as **associative vs. geometric**, highlighting implications for reasoning, retrieval, and knowledge organization. [[Paper](#) under review]

Sanofi

Cambridge, MA

AI Research Scientist Intern, Unstructured Data Search Team

May 2024 – Aug 2024

- Developed a novel mRNA-Language Model (mRNA-LM) using three specialized encoder-only transformer models for different mRNA regions pretrained on over 10 million mRNA Sequences, achieving a 15% improvement over SOTA models on regression and classification tasks for mRNA properties. [[Resulted in Publication](#)]
- Proposed a Contrastive Language-Image Pre-training (CLIP) module for multimodal alignment of mRNA sequence segments, enabling unified representations for full-length mRNA sequences and improving downstream task performance.

Microsoft

Vancouver, Canada

Software Engineering Intern

Jan 2015 – May 2015

- Developed Windows 10 applications and automation tools to enhance software development efficiency.

SKILLS

Programming Languages: Python, C/C++, Java, MATLAB, Git, Bash

Deep Learning Libraries: PyTorch, TensorFlow, Transformers, HuggingFace, OpenAI Gym

Python Libraries: Numpy, Matplotlib, Pandas, SciPy, Scikit-Learn

AI/ML and Deep Learning Techniques: GenAI, Representation Learning, Contrastive Learning, Temporal ML, Multimodal ML, Regression, Survival Analysis, Reinforcement Learning, Transformers and LLMs, BERT, GPT, Llama, LSTM, CNN, VAE, GAN

AWARDS & HONOURS

Natural Sciences and Engineering Research Council of Canada (NSERC) 3-year Doctoral Fellowship	Sep 2023–Sep 2026
Tata Consultancy Services (TCS) Presidential Fellowship	Sep 2024–Aug 2025
Suresh Konda Memorial Best First Research Paper Award, Carnegie Mellon University	May 2023
Center for Machine Learning and Health Digital Health Innovation Fellowship	Sep 2022–Aug 2023
Carnegie Mellon University Presidential Fellowship	Sep 2018
UBC Self-Directed Research Abroad Award (Computational Gene Sequencing Research at USC)	May 2017–Aug 2017
Award for Excellence in Medical Engineering Student Design and Innovation as Finalist	Apr 2017
Coordinated International Experience Award (ETH Zürich)	Sep 2016–Dec 2016
The Google Games at UBC: 3rd Place / 1st Place in Coding Challenge, Google	May 2016
IEEEExtreme 9.0 Programming Contest: 1st Place at UBC, 4th in Canada, IEEE	Oct 2015

PROFESSIONAL SERVICES AND TEACHING EXPERIENCE

Reviewer: ICML 2026, NeurIPS 2025–2023; ICLR 2026–2024; ML4H 2025–2024, CHIL 2025–2024; MLHC 2025, AAAI 2023

Teaching Assistant: Probabilistic Graphical Models (2024), ML for Problem Solving (2023), Unstructured Data Analytics (2023,2022), PhD Microeconomics(2024–2022), Neural Signal Processing (2020), Algorithms and Data Structures (2017, 2018)

PATENTS

Sven Jager, Ziv Bar-Joseph, Sizhen Li, **Shahriar Noroozizadeh**, Saeed Moayedpour. *Predicting mRNA properties using large language transformer models*. [WO 2025/026948 A1](https://www.uspto.gov/patents/publications/2025/026948/A1). Published Feb 6, 2025. Filed Jul 26, 2024. Assignee: Sanofi SA.

SELECTED PHD COURSEWORK

Machine Learning Theory and Methods: Advanced Machine Learning, Statistical Machine Learning, Probabilistic Graphical Models, Convex Optimization, PhD Statistics, Statistics and Probability

AI and Sequence Modeling: Advanced Natural Language Processing, Multimodal Machine Learning, Computer Vision, Deep Reinforcement Learning and Control, Generative AI

Causal and Decision Sciences: Causality & Machine Learning, PhD Econometrics (Theory & Methods), PhD Microeconomics, Human Judgment and Decision Making, Systems Neuroscience

SELECTED ACADEMIC PROJECTS

Clinical Trial NLI Enhancement – SemEval 2024 Task 2 – Advanced NLP (CMU) Nov 2023 – Mar 2024

- Designed a model for SemEval 2024's Safe Biomedical NLI task, focusing on enhancing LLMs for reliable inference in clinical trials' data analysis.
- Utilized GPT for generating coherent premises and finetuning DeBERTa on entailment and contradiction classification.
- Implemented noisy channel model prompting enhancing few-shot learning performance for sparse and unbalanced data.

"Jarvis, Follow my Lead" – Multi-Modal Machine Learning (CMU) Jan 2022 – Jun 2022

- Spearheaded a team project to align natural language instructions with egocentric visual cues for household task execution using ALFRED benchmarks.
- Improved model robustness by incorporating pre-trained CLIP encoders with Episodic Transformer architecture.
- Showcased the project's advancements at the CVPR Embodied AI Workshop, highlighting improvements in object recognition and directive interpretation.

"BERT, do you still love me?" – Probabilistic Graphical Models (CMU) Jan 2021 – May 2021

- Conducted a comprehensive study on enhancing BERT and RNNs with graphical models (CRF) for POS tagging and NER tasks, demonstrating improved encoding capabilities.
- Awarded Best Project and Poster in the PGM course for innovative approach to NLP task performance enhancement.

Model-Based RL with PETS – Deep Reinforcement Learning (CMU) Nov 2019 – Dec 2019

- Implemented the Probabilistic Ensemble and Trajectory Sampling (PETS) algorithm in the OpenAI-Gym Pusher environment, enabling a robotic arm to push objects to target locations using a probabilistic neural network ensemble.
- Employed model predictive control with the cross-entropy method for effective planning and trajectory sampling.
